**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,2,5-8 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Gruenberg (3150320).

Regarding Claims 1,2,7 and 8, Gruenberg shows a communication method and apparatus for stealthy information communication, generally in Figure 1, comprising the steps of transmitting RF from a first location via transmitter 30, and positioned at a second location, a controllable passive reflector 20 of RF energy with modulator, for modulating the energy in response to information to be transmitted and reflected thereby, a receiver 36 at a third location 24, which coincides with the first location, all arranged as claimed. The receiver 36 is also considered remote from the transmitter in as much as it is shown as a separate self-contained antenna located aside the transmitting antenna 30, and particularly since there is no specific definition for remote or any distance, such as wavelength dimensions, recited in the claims.

Regarding Claims 5, 6 and 10, the step of receiving is performed with the aid of knowledge of the modulation and with the aid of mutual synchronization because the receiver employed (i.e., at station 24) must demodulate and correlate (via

synthesizing and utilizing the digital code, as set forth by Gruenberg at col. 6, lines 37-41) the received signal, and between the modulator and receiver.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3,4 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gruenberg (3150320).

Regarding Claims 3,4 and 9, Gruenberg suggests in col. 9, lines 7-11, that the step of modulation and the modulator, modulates the phase of the signal.

Although a specific circuit for phase modulation is not specifically illustrated, Gruenberg acknowledges that the type or mode of modulation is well within the common knowledge of the skilled artisan, and thus the antenna artisan would have found it obvious to employ a phase-modulated passive reflector with the appropriate circuitry for phase modulation.
